

CS615 Internet Solutions Engineering

WebApp Group Project 2023

Instructions

You are a junior web and internet solutions engineer who just joined a small web development and cloud application firm. Your first project is to develop a web application together in a small team of 3 people.

Submission of documentation and code: Thursday, 13th April 2023 12 noon

Submission of presentation: Wednesday, 19th April 2023 12 noon

Presentation of project with all team members: **Thursday, 20th April 2023 (TBA)**

You will be assigned a project topic that is expected to have the following parts:

1. **Front-end components**, involving technologies such as HTML, CSS and JS and the Bootstrap framework. You have the freedom to use other technologies also if it is helpful for your project and if you want to learn.
2. **Back-end components**, involving NodeJS technology. You may apply frameworks. For projects you will implement a REST API that is consumed by a front-end interface.
3. **Database with storage/management code**: Data management that allows persistency, usually facilitated by a database (use MongoDB).
4. **Code Management**: You are expected to manage your code on git as a private repository and you will invite me and the head demonstrator. All team members are expected to commit and work from this repository.
5. **Documentation and Presentation**: You will write a **4-page** (max length) documentation for your application (brief appendix can also be included if necessary). Your document will be in IEEE format and you will submit in **PDF**. You will give a 15-minute team presentation of your application including a demo.

For your technical documentation you may use Word or LaTeX. Regardless, **you must submit a PDF file**. Keep the documentation **concise and to the point** (make every word count) and use diagrams that provide useful information. You must submit your code to the submission system.

Marking scheme

1. Front-end (20%):

- (a) Code quality and sophistication of front-end functionality [] 15%
- (b) Code documentation (detail, specificity, level of understanding) [] 5%

2. Backend (30%):

- (a) Code quality and sophistication of back-end functionality [] 20%
- (b) Code documentation (detail, specificity, level of understanding) [] 10%

3. Database (20%):

- (a) Code quality and sophistication of database code. [] 15%
- (b) Code documentation (detail, specificity, level of understanding) [] 5%

4. Code Management (5%)

[] 5%

5. Documentation (15%):

- (a) Four page (max) report covering architecture + important tech. specifics (appendix also allowed in addition to the four page limit). [] 15%
- (b) Presentation [] 10%

Penalties will be applied if you do not submit your report in PDF, if you do not provide the code, if you do not host your code as described and if you submit late. All submissions will be carefully screened for evidence of academic misconduct (use of machine generated artefacts, copying and collusion). Any student/team who is found guilty of misconduct will automatically be awarded a mark of zero and considered for disciplinary action.
